Project Name	IOT Based Safety Gadgets for Child safety Monitoring & Notification

The screenshot displays the Node-RED web interface in a browser. The main workspace shows a flow named 'Flow 1' with two nodes: an 'IBM IoT' node (blue) and a 'msg payload' node (green). The 'IBM IoT' node is connected to the 'msg payload' node. The left sidebar contains a 'filter nodes' search bar and two categories of nodes: 'common' (inject, debug, complete, catch, status, link in, link call, link out, comment) and 'function' (function, switch). The right sidebar shows the 'debug' console with a list of messages received from the IoT node. The messages are JSON objects containing 'pulse rate' and 'Heart beat' values. The bottom status bar shows the system clock as 12:10 on 16-11-2022.

Node-RED interface showing a flow for monitoring heart rate and pulse rate. The flow starts with an IBM IoT node (connected), which triggers a function node (f) labeled 'pulse_rate' and another function node (f) labeled 'Heart beat'. The 'pulse_rate' function node outputs to a 'pulse_rate' gauge node. The 'Heart beat' function node outputs to a 'Heart_beat' gauge node. Both function nodes also output to a 'msg payload' node, which then outputs to a 'msg payload' node. The 'msg payload' node outputs to a 'msg payload' node.

Debug messages (ctrl-g d) show the following data:

```
msg.payload: Object
  { pulse_rate: 63, Heart_beat: 94 }
